Nursing Anne Simulator Geriatric

Helping you train for geriatric patient care

Today's nurses require clinical and communication skills to handle the uncertainties, complications, and complexities of geriatric nursing realities. Nursing Anne Simulator Geriatric increases simulation fidelity to maximize training outcomes.

Nursing Anne Simulator Geriatric is available as a full body pre-assembled simulator or as an add-on module for the Nursing Anne Simulator modular platform.

;

Enhancing Realism for Simulation Success

Equipment and psychological fidelity are key factors in increasing the realism of simulations. For learners to perceive the simulation to be believable, they need to train on equipment that duplicates the appearance and feel of the situation they are training for.

Designed for Geriatric Patient Care

Nursing Anne Simulator Geriatric modules provide the physical realism needed in simulation to inspire emotional investment without sacrificing function. Geriatric modular add-ons physically modify the Nursing Anne Simulator to show an aged appearance.

Investing in simulation fidelity

Nursing Anne Simulator Geriatric creates a whole new patient demographic to train for with a full body solution available in Medium and Dark tone that includes realistic anatomical features.
