

Nursing Anne Simulator

Helping you train for the highest level of care

A modular platform

One Simulator - Many Patients

Nursing Anne Simulator is a modular platform consisting of a variety of accessories and interchangeable parts that facilitate a variety of simulated patients and provide unique training opportunities.

Male module

Extends clinical skills and simulation training across genders to better prepare students for the care of diverse patients.

Geriatric module

Providing the physical realism needed to help learners reflect on the uncertainties, complications, and complexities of geriatric nursing realities.

African Descent module

Provides learners with added realism to help develop cultural competence and situational awareness about cultural characteristics that can play a major role in a patient's care.

Staged Wound Feet

Feet skin accessories that represent staged wounds for advanced skills practice with diabetic, pressure ulcer or bed sore feet.

Postsurgical Mastectomy Skin

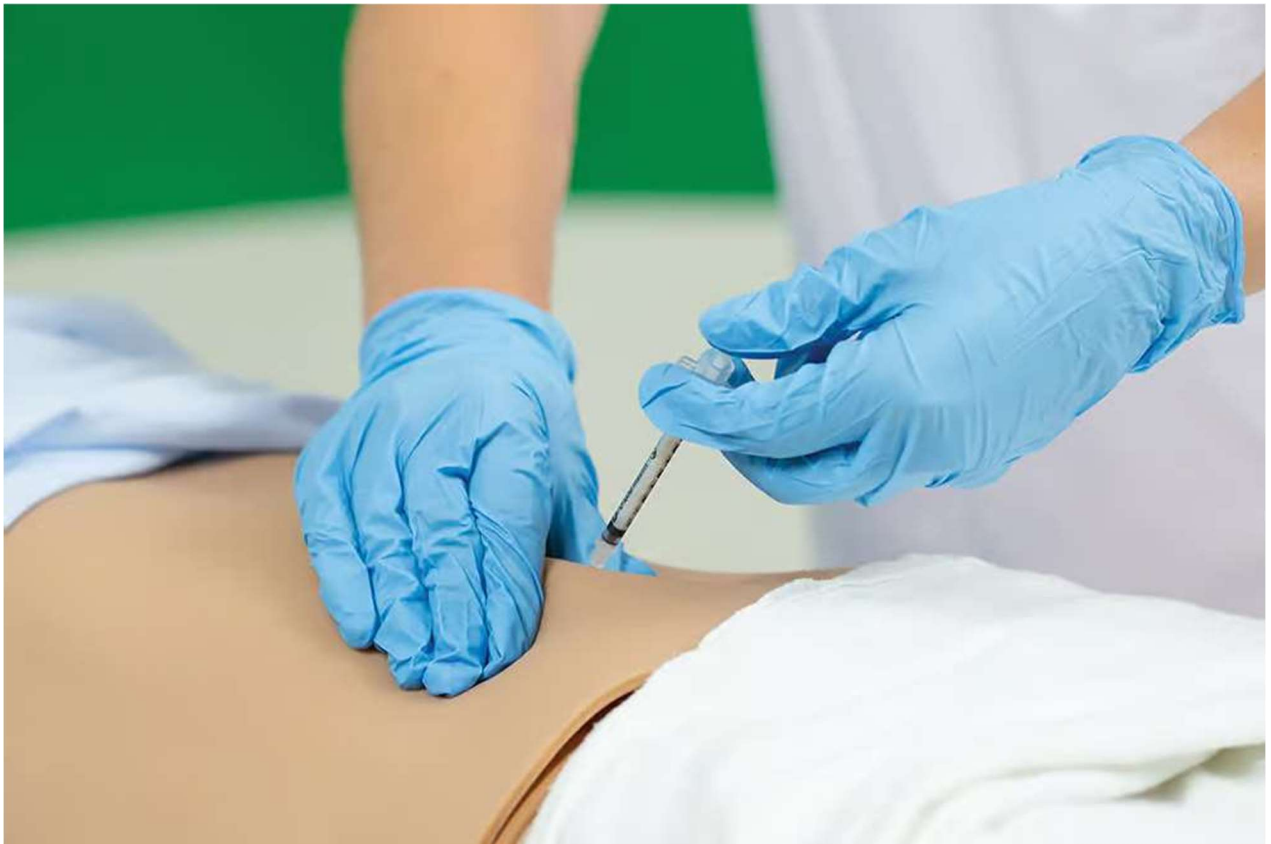

Learners can practice post-surgical care skills for a patient who has undergone a mastectomy procedure.

Wound Assessment Care Kit

Skin modules to help learners identify, assess and treat different types of patient wounds.

Subcutaneous Injection Pads

Absorbable pads placed under the skin to help learners with skills training of administering injections.
