

Modular Skills Trainer

The practical, portable solution for skills practice

16-in-1 trainer for skills building

Build competence through practice

Designed by Nursing experts for competency development, the Modular Skills trainer offers over 16 different clinical skills practice opportunities for single or multiple learners.

The Modular Skills Trainer fits the needs of today's nursing programs, providing learners with the opportunity to train on essential skills they will be expected to perform in real clinical environments.

Skills development in any setting

Interchangeable accessories for multiple training opportunities

Equipped with a wide variety of accessories in different skin tones to represent diverse patients, learners can easily switch accessories to practice and repeat skills to build competence.

Durable for repeat use by one or many learners

Constructed from lightweight recycled materials, the Modular Skills Trainer is easy to transport, yet strong enough to withstand repeat use. Its easy-to-clean properties make it the ideal training device for remote or classroom-based practice. Intuitive configurations ensure ease-of-use and storage for after each training session.

Practice right away

Requiring no electrical connectivity or additional hardware, this portable trainer is ready for single-user, independent skills practice or in group practice, such as peer-to-peer training as soon as the unit arrives.

Practice a wide array of patient care skills:

- Nasogastric Tube Insertion
- Wound Care
- Tracheostomy Care
- Central Line Dressing Change
- Ostomy Care
- Urinary Catheterization & Enema
- Injections
- Intravenous Catheterization & Phlebotomy
- Suppositories (rectal & vaginal)
- Perineal Care
- Oxygen Therapy
- Nasal Swab
- G-tube Care

Making the most of your Modular Skills Trainer

Combining hands-on clinical skills practice with virtual simulation and digital assessment tools provide instructors with a more competency-based approach for improving learning outcomes.

Students are better prepared to exercise clinical judgment, decision making and communication, before applying this collective learning in high fidelity simulation with realistic, patient simulators such as the Nursing Anne Simulator.

vSim for Nursing

Web-based virtual simulation delivering immersive clinical patient cases and real-time feedback for building clinical judgment and decision-making skills.
