

## Half Body CPR Manikin EP/1100

Adam's Apple: Accurate localization of carotid artery

Sternum, rib line clear

High elasticity

This **Half Body CPR Manikin** is designed for effective training in **cardiopulmonary resuscitation (CPR)**, focusing on the essential upper body anatomy. It offers realistic feedback and performance for both **artificial respiration** and **chest compression** techniques.

### 🔍 Key Features:

- **Realistic half-body design** – Includes head, neck, chest, and upper torso
- **Artificial respiration simulation** – Allows mouth-to-mouth or bag-mask ventilation
- **Accurate chest compression feedback** – Realistic resistance and recoil for proper depth and rate
- **Airway simulation** – Head tilt, chin lift to open airway; supports airway obstruction scenarios
- **Visible chest rise** – Demonstrates proper ventilation during rescue breaths
- **Replaceable parts** – Disposable lung bags and face shields for hygiene and reuse

### 🎯 Ideal For:

- CPR and First Aid Training
- Schools, hospitals, and skill development centers
- BLS, ACLS, and community training programs
